

JOB DESCRIPTION

JD NO. 202401

1. Angular Developer

Responsibilities:

- Design and develop complex, reusable, and maintainable Angular components and modules.
- Implement responsive design principles and ensure flawless cross-browser compatibility.
- Integrate data from various sources using RESTful APIs, WebSocket and back-end services.
- Write clean, efficient, and well-documented code adhering to coding standards.
- Implement unit and integration tests for code coverage and stability.
- Collaborate with designers and other developers to translate wireframes and designs into high-quality code.
- Participate in code reviews, offer constructive feedback, and continuously improve code quality.
- Stay up to date with the latest Angular developments, libraries, and best practices.
- Debug and troubleshoot complex issues to ensure optimal application performance.
- Proactively suggest improvements and optimizations to existing codebase.

Qualifications:

- 3-5 years of experience building web applications with Angular framework.
- Strong understanding of Angular concepts like components, directives, services, routing, and modules.
- Proficiency in HTML, CSS, and JavaScript (TypeScript preferred).
- Experience with RESTful APIs and data integration techniques.
- Knowledge of git(SCM)
- A willingness to learn new technologies as needed.
- Familiarity with testing frameworks like Jest or Karma.
- Excellent problem-solving and analytical skills.
- Strong communication and collaboration skills.
- Ability to work independently and as part of a team.
- Passion for clean code and continuous improvement.

Good to have:

- Experience with CI/CD pipelines and build tools.
- Knowledge of server-side technologies like Node.js or Python.
- Experience with UI/UX best practices.
- Familiarity with database technologies such as PostgreSQL, MongoDB
- Experience with docker container
